- Mission Statement

# HOSPITAL & MEDICAL FACILITIES

Medical emergencies, stressed visitors and the potential security threats creates a fast-paced and highly emotionally charged environment in hospitals and medical facilities. This is potentially a source of escalating issues that need to be addressed efficiently. For this reason, ProGuard specifically designed a program tailored to help hospitals and medical facilities meet the strict regulatory requirements they are subject to. This program is also designed to protect residents, staff, property, information, and reputation in a fast-paced medical environment.

## OUR CORNER STONES

ProGuard employees assigned to the healthcare security program have completed the training designed by the International Association for Healthcare Security and Safety Standards. ProGuard complement this training with courses focused on areas such as: CPR and first aid, protecting medical records and HIPAA, crisis intervention, courteous enforcement, and awareness sessions on blood-borne pathogens.

## MEASURABLE RESULTS

This fast-paced environment could worsen if visitors unload their own stress into the emotionally charged environment. ProGuard can help the medical staff by efficiently screening visitors to expedite or bar their admittance to the facility; and ensuring that visitors wait in the designated areas. In addition, ProGuard designed a specific training to ensure that officers will maintain the highest levels of confidentiality in any situation.

## PARTNERSHIP

Today's sophisticated Security Director is seeking to control and avoid risk exposure. ProGuard works closely with each of its clients to ensure that all requirements are actively being met. Through ProGuard's comprehensive online reporting system, the client is able to track the security program and deliverables measured against set security matrixes in order to assess the overall success and reliability of the Security Program.
