PROGUARD ENTERS DISTRIBUTION AGREEMENT WITH KNIGHTSCOPE

ProGuard to Accelerate the Deployment of New Advanced Physical Security Technology

Developed by Knightscope in Silicon Valley

San Francisco, CA: On May 4, 2015, ProGuard Security Inc., a premier provider of security services, enters into a distribution agreement with Knightscope Inc., developer of Autonomous Data Machines (ADMs) aimed to predict and prevent crime, providing ProGuard with rights to deploy Knightscope's technologies. Knightscope's ADMs are fully autonomous robots with an array of onboard sensors used to monitor the surrounding environment and provide a physical and commanding presence in public places where security is needed. A single ADM is capable of generating over 90 terabytes of data per year. It communicates via a wireless network directly with the Knightscope Security Operations Center (KSOC), a browser-based user interface, to provide real-time alerts of unusual or suspicious activity.

Of the recent agreement, ProGuard's CEO Nils Welin said, "Being on the forefront of evaluating and implementing new technologies is core part of ProGuard's business strategy. The agreement with Knightscope will allow ProGuard to offer a unique security platform to our current and future clients. The combination of Knightscope's breakthrough technology and our human resources, in the form of security officers, provides a truly disruptive solution in the security industry."

Through Knightscope's unique combination of hardware and software, the goal is to significantly reduce crime which has a \$1+ trillion annual negative economic impact on the US economy. According to Knightscope, deploying ADMs in outdoor environments on corporate campuses, around data centers, shopping malls, stadiums, residential complexes and where private security guards are stationed will

free humans to address strategic tasks while the machines handle the monotonous, computational heavy and sometimes dangerous tasks.

“Building partnerships with companies such as ProGuard will support Knightscope in accelerating deployments and addressing our significant and ever growing customer wait list” says William Santana Li, chairman and chief executive officer, Knightscope. “The partnership with ProGuard will also provide Knightscope with valuable experience within different vertical market segments in the contract security industry.”

About ProGuard Security Services Inc.

Founded in 1998, ProGuard Security provides an unmatched level of customer service in the delivery of quality contract security services. The company offers a highly integrated security solution with a high level of automation and technology built into the delivery of quality security services.

ProGuard’s determination to “WOW!” each client is a true testament to the company’s focus on quality services. From the inception of ProGuard, the company’s focus has been squarely placed on our four corner stones; Our People, Our Training, Our Process and **Our Technology**. Our daily focus on building the right team, developing the employees through ongoing industry leading training courses, and supporting the employees with the right tools and leadership in the execution and delivery of service, has proven to build lasting and valuable relationships with our clients and employees.

All employees at ProGuard are offered great advancement and personal growth opportunities within the organization. As a leader in quality security services, ProGuard is also a leader in the implementation and utilization of the best and most appropriate technology available in the market.

About Knightscope Inc.

Knightscope is developing an autonomous technology platform that fuses robotics, predictive analytics and collaborative social engagement to predict and prevent crime. Deployment of the platform will empower public and private sectors to proactively build stronger, safer communities, ultimately saving money and lives.
